

Mounted cultivators

Mounted cultivators / tines fixing on clamping rings

The cultivator has been designed for the soil opening, crushing of clods, weeds undercutting and mixing fertilizers with soil. It is recommended to use cultivator on the stubble field to stop evaporating water from soil.

The offer contains cultivators tines fixing on clamping rings. Cultivator tines are ended with easy changeable coulters. Tines are fixed to the frame in the three rows with interspace of **140 mm** by means of yoke screws. The basic equipment of the machine are two supporting wheels that set machine working depth.
