

## Mounted cultivators - light tine

The cultivator has been designed for the soil opening, crushing of clods, weeds undercutting and mixing fertilizers with soil. It is recommended to use cultivator on the stubble field to stop evaporating water from soil.

Light cultivator teeth are ended with easy changeable coulters. Tines are fixed to the frame in the four rows with interspace of 140 mm by means of retaining straps. The basic equipment of the machine are two supporting wheels that set machine working depth.
